
Git & GitHub (Introduction and Practical session)

Session by Atharva Ikhar

Associate Software Engineer

What is GitHub?

when a non programmer
or hacker go to github

What is Git? And Why we need it?

Git is software for tracking changes in any set of files, usually used for coordinating work among programmers collaboratively developing source code during software development.

Let's see in simple terms by breaking it

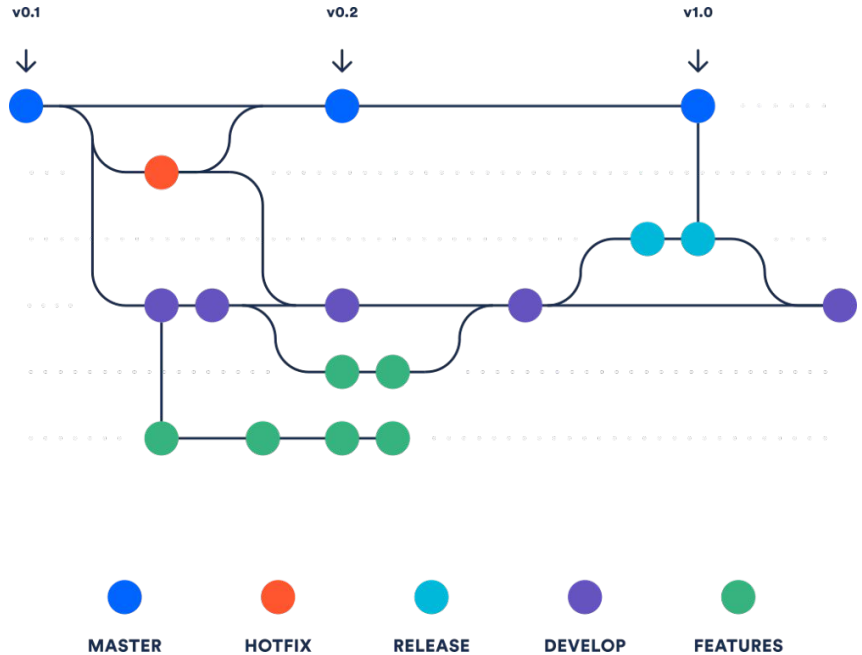

Have you ever faced this situation?

- While working on a project, have you ever faced situation that you have updated a piece of code and then realise it later that **previous** code was actually **effective**?
- When project is complete and while giving the demo, you realise some piece of code is **malfunctioning** but doesn't know **who worked** on it?
- Or Want to make two **version** of the same project/program?

Solution: Version Control System.

- Local Version Control System.
- Centralized Version Control System
- Distributed Version Control System

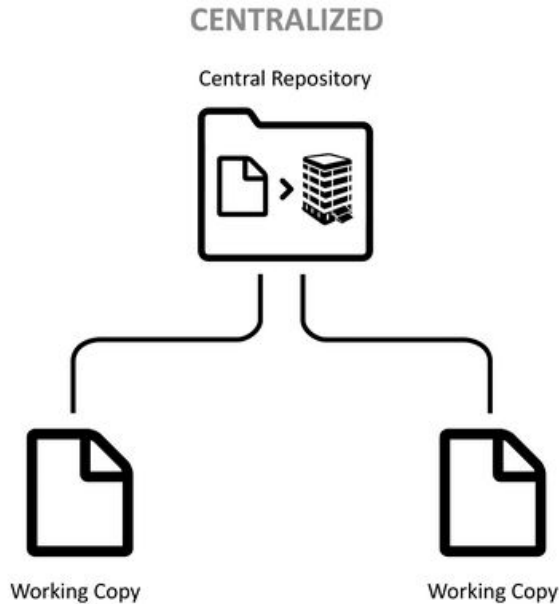

Solution: Version Control System.(1)

- Local Version Control System.
- <https://learngitbranching.js.org/?NODEMO>

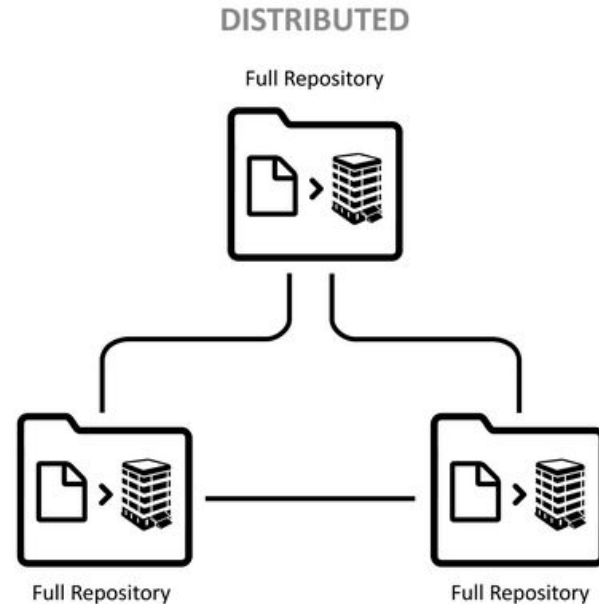

Solution: Version Control System.(2)

Centralized Version Control System

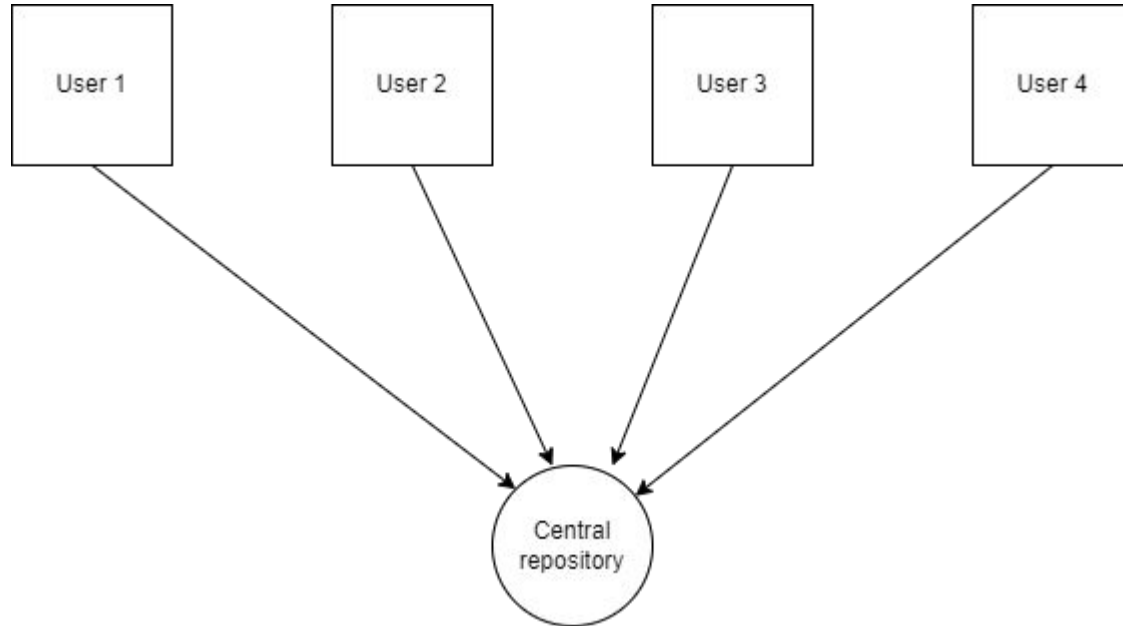

Distributed Version Control System

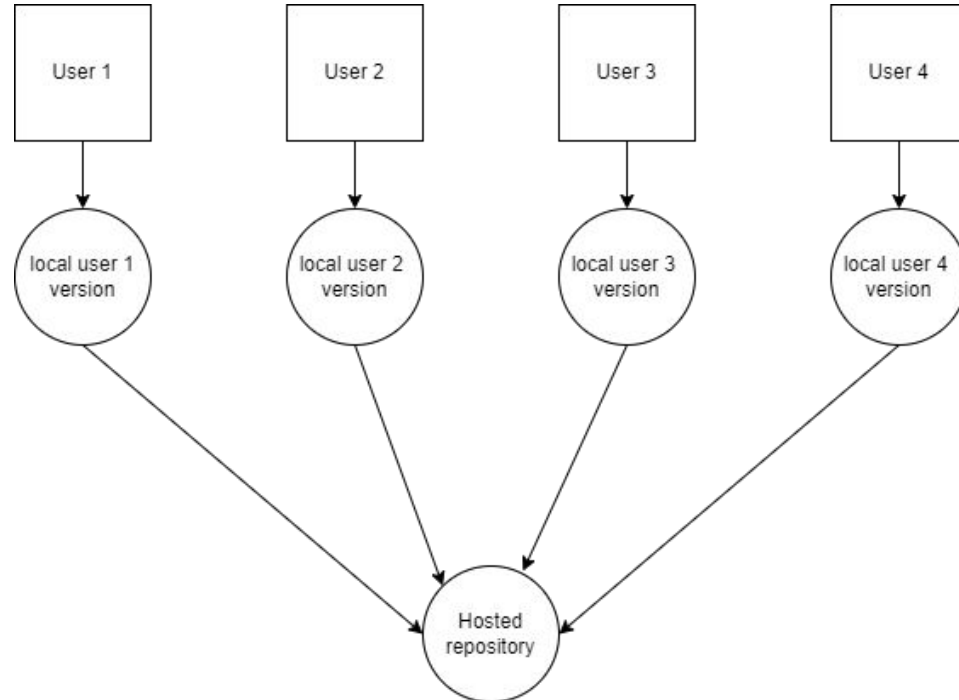

Solution: Version Control System.(2)

Centralized Version Control System

Solution: Version Control System.(2)

Distributed Version Control System

1. Take away:

- We learned “what is VCS?”
- Why it is needed?
- About it's background.

Any Questions?

What is Git?

- It is Local Version Control System.

What is GitHub?

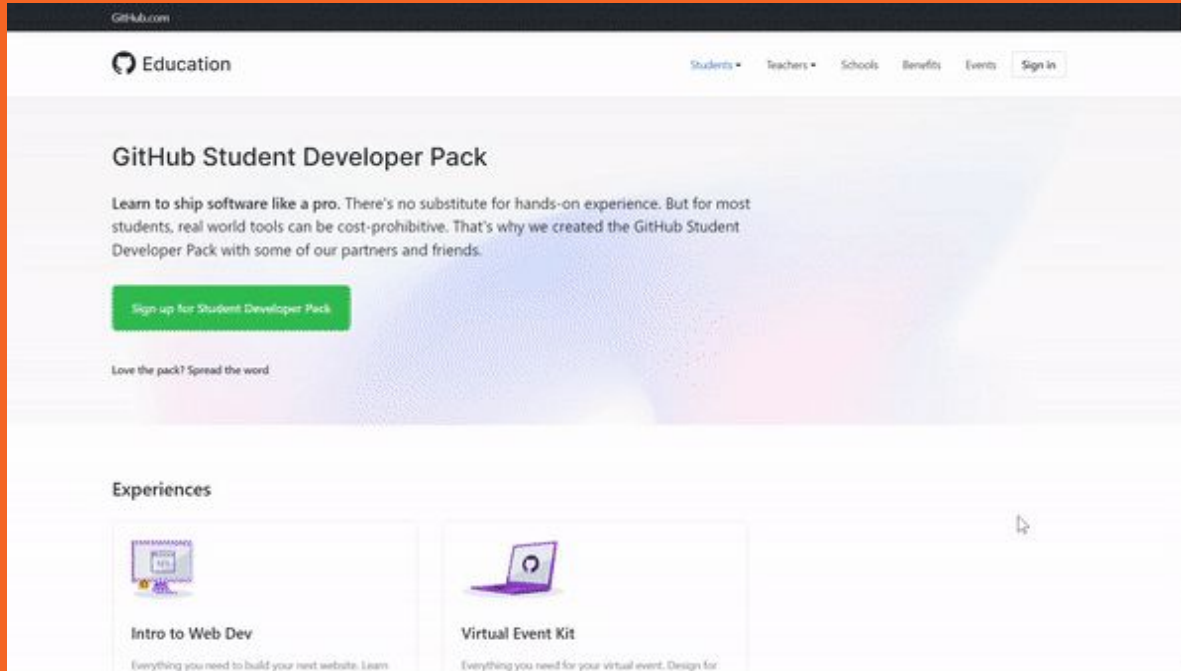

- It is **Remote Distributed Version Control System**.
 - Linus Torvalds has hosted the Linux kernel source **tree** (with all documentations and subdirectories) on GitHub, and he works on it frequently.
 - Microsoft acquired GitHub, for **\$7.5 billion** in stock.
 - Github have **over 73 million developers** and more than **200 million repositories** (including at least 28 million public repositories)

Famous software/tech **hosted** on GitHub-

FreeCodeCamp, Vue, React, Tensorflow, Bootstrap, VS Code and many more.

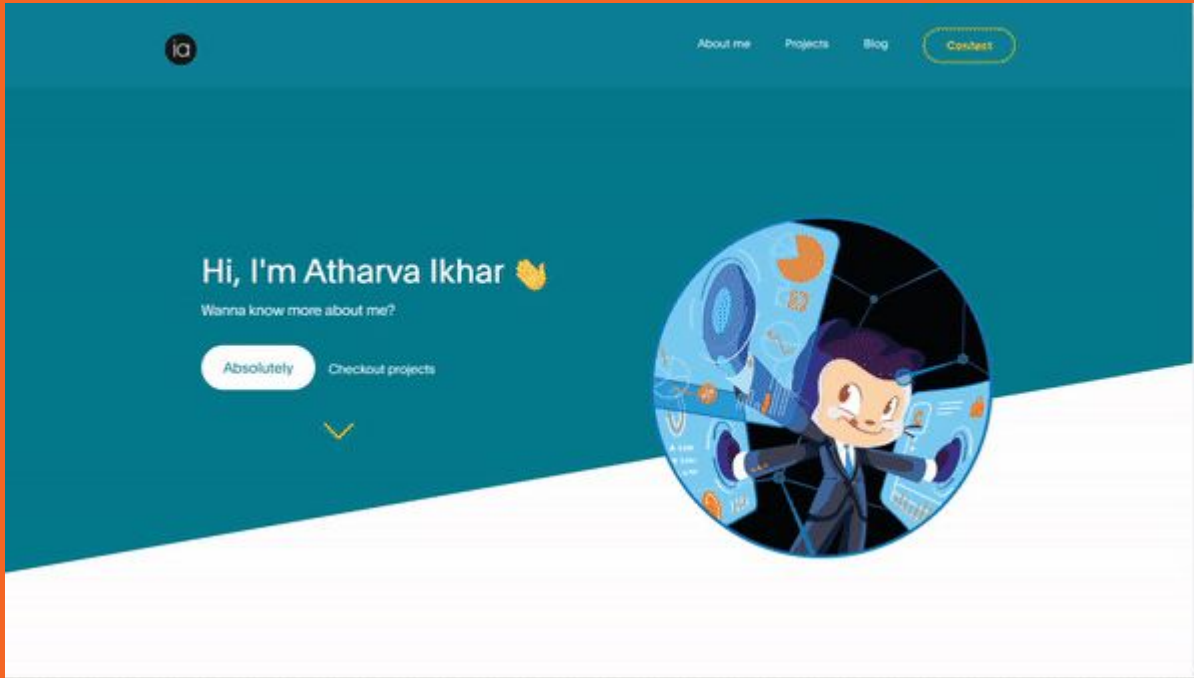

GitHub Student Developer Pack

Tip

You can get it at
<https://education.github.com/pack>

Get your own cool website for free

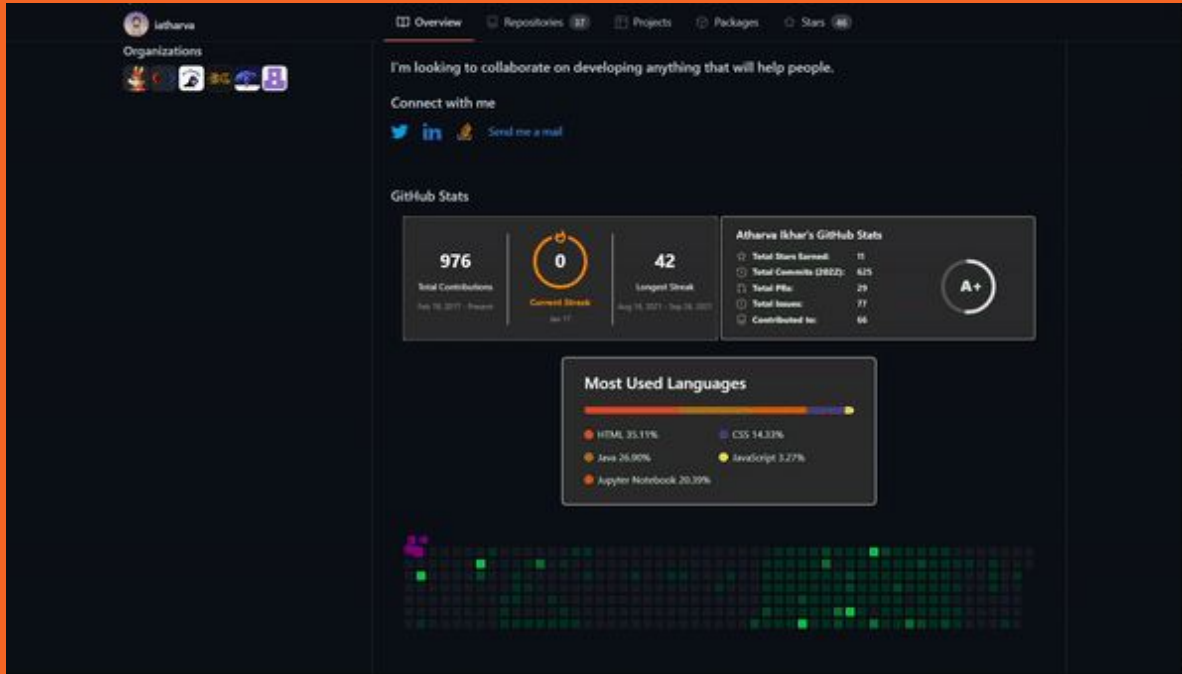

Tip

You can read more about it here

<https://pages.github.com/>

Show off your stats anywhere

Tip

Heck, you can even add your github profile link on your resume 😎

Positive, Humble and helpful community

Ben Awad
@benawad

deleting dating apps because I want to meet someone the old fashioned way (by making a pull request on their GitHub repo)

Let's get familiar with the basic terms and lingos first

Tip

Revising it again after the lectures would clear your concepts for sure.

—

Repository.

Repo

(Folder or a project which is git initialized

or uploaded on

github/gitlab or some vcs)

README.md.

In repo

(Contains the information about the project/repository so the other person/developers won't be clueless.

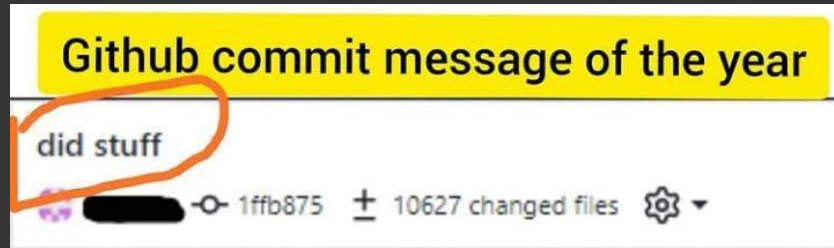

- Uses markdown language)

Commit.

(creating a snapshot of the files at a particular point in time)

When you're dead but remember you forgot to git commit git push your last code iterations

Git logs.

(See all the detailed information on all commits)

Branch.

(Creating another version of project)

Pull Request.

PR

(When you have made some changes in someone else's code and want them to merge your code and their code to result in new improved code/project)

Maintainer.

In PR

(To avoid/resolve conflicts
maintainer of the repo review
the code which is submitted
by contributor)

Jared Palmer

@jaredpalmer

When you merge your own pull request

6:05 AM · 24 Jun 19 · [Twitter for iPhone](#)

—

Contributor.

In PR

(Please like you and me who make some changes(by making useful PR) & want to help in project)

Conflicts.

In PR

(When you are merging your code in different version than previous version)

Code review.

In PR

(To avoid/resolve conflicts
maintainer of the repo review the
code which is submitted by
contributor)

Approval.

In PR

(Once code is reviewed it can be either in approved state, rejected state or changes needed)

Me adding comments to the PR of a colleague who didn't approve my PR :

MEME
SC#E

HAMARI BADLA LENE
KI PARAMPARA HAI

Merging the code. from PR

(When you have made some changes in someone else's code and want them to merge your code and their code to result in new improved code/project)

When you are gonna merge two branches after long time..

Next Session.

Let's get our hands dirty

Reference for how to create github
account

<https://dev.to/iatharva/how-to-create-github-account-for-beginners-52k8>

A background image of a soccer game at night. The field is illuminated by bright stadium lights, creating a high-contrast scene. Several players in various colored jerseys are visible on the field, some in motion. The sky is dark, and the overall atmosphere is that of a professional sports event.

Any Questions?

You can reach me from iatharva.github.io

Thank you for your time

And hope you step into open source and become a active contributor towards the community.
